

A close-up, shallow depth-of-field photograph of a row of glass vials filled with a bright red liquid. The vials have white caps with a grey circular seal in the center. The caps of the vials in the foreground are in sharp focus, while those in the background are blurred. The vials are arranged in a slightly curved line, receding into the distance. The background is a plain, light-colored surface.

Healthcare

ExpediteTCSM

Quality control meets climate control.

Get it there on time and on temperature.

The American Airlines Cargo ExpediteTCSM Active solution is with you all the way, from takeoff to landing, with advanced, temperature-controlled containers that actively regulate environment levels and ambient conditions.

Expand your global cold chain reach.

ExpediteTCSM Active is a full-service cold chain solution designed for a broad range of temperature-controlled shipping needs. Our procedures have been tested time and again, so you can rest easy knowing your shipment will reach its destination at its desired temperature.

Active solution service feature highlights:

- Highest boarding priority
- High-visibility monitoring systems
- Unique tags for enhanced visibility and easy identification
- Detailed checklist for each shipment
- Structured contingency planning processes
- Convenient container lease program
- Charging (or re-icing and battery changes), as required by a transportation schedule
- Available in 130 cities worldwide
- Extensive worldwide cold chain training program
- QEP accredited in 59 cities and 23 countries

The Envirotainer and PharmaPort 360 units are temperature-controlled containers that actively regulate temperature levels.
